

Flashcards

Q: What is the primary goal of Artificial Intelligence (AI)?

A: To simulate human intelligence using computers.

Q: How does Machine Learning differ from traditional programming?

A: Machines learn from data without explicit programming, enabling them to make predictions and find outliers.

Q: What are neural networks, and which area of AI uses them extensively?

A: Neural networks are computational models inspired by the human brain; they are used extensively in Deep Learning.

Q: What is Generative AI's main function?

A: To create new content, such as text, audio, and video.

Q: What are Foundation Models and how do they relate to Generative AI?

A: Foundation models are large models trained on vast datasets (e.g., large language models) that drive Generative AI.

Q: Give examples of what Machine Learning is useful for.

A: Prediction and outlier detection.

Q: What is the historical order of AI advancements mentioned in the video?

A: Early research projects -> Expert Systems (80s-90s) -> Machine Learning (2010s) -> Deep Learning (2010s) -> Generative AI (2020s)
