

Quiz

1. Which of the following BEST describes the relationship between AI, Machine Learning, and Deep Learning?

- A. AI is a subset of Machine Learning, which is a subset of Deep Learning.
- B. Machine Learning is a subset of AI, and Deep Learning is a subset of Machine Learning.
- C. Deep Learning is a subset of AI, and Machine Learning is a subset of Deep Learning.
- D. AI, Machine Learning, and Deep Learning are independent fields with no overlap.

Answer: B

Explanation: Machine Learning is a subset of AI, focusing on learning from data. Deep Learning is a subset of Machine Learning.

2. What is the primary characteristic that distinguishes Machine Learning from traditional programming?

- A. Machine Learning uses explicitly programmed rules, while traditional programming learns from data.
- B. Machine Learning learns from data without explicit programming, while traditional programming relies on pre-defined rules.
- C. Machine Learning is only used for generating content, while traditional programming is used for other tasks.
- D. Machine Learning is more predictable than traditional programming.

Answer: B

Explanation: Machine Learning algorithms learn from data to make predictions or decisions, unlike traditional programming which follows explicit instructions.

3. Which technology utilizes neural networks with multiple layers to mimic the human brain?

- A. Artificial Intelligence
- B. Machine Learning
- C. Deep Learning
- D. Generative AI

Answer: C

Explanation: Deep Learning employs neural networks with numerous layers to process information in a manner similar to the human brain.

4. What is the MAIN function of Generative AI?

- A. To analyze existing data and find outliers.
- B. To predict future outcomes based on historical data.
- C. To generate new content, such as text, audio, and video.
- D. To solve complex mathematical equations.

Answer: C

Explanation: Generative AI is designed to create novel content, encompassing various forms like text, images, audio, and video.

5. What are 'Foundation Models' in the context of Generative AI?

- A. The ethical guidelines that govern the use of AI.
- B. The base models, such as large language models, used by Generative AI to create content.
- C. The hardware infrastructure required to run AI algorithms.
- D. The data sets used to train Machine Learning models.

Answer: B

Explanation: Foundation Models, like large language models, are the fundamental building blocks that Generative AI utilizes to generate content.
